

## Staff Augmentation Services

*A Staff Augmentation Plan enables an agile IT organization that rapidly adapts to a changing environment in productive and cost effective ways.*

### Why should every organization have a Staff Augmentation Plan in place?

The ability to attract, retain and train specialized IT talent is a challenge for many organizations. And, with the rapidly evolving nature of technology and business needs, the demands on IT resources can fluctuate dramatically. Project implementations often require additional resources or expertise beyond that of the internal IT staff. Hiring, training and sustaining additional permanent, full time staff members is not always feasible or cost effective.

Companies are dependant on seamless service delivery from their IT Departments. The absence of skilled resources, planned or unforeseen, can cause delays that cause productivity and financial losses. Worse, a loss of critical skills can leave a department unable to respond to problems that arise. The agility of your IT organization can impact your business outcomes.

Senior, Human Resources, and IT Executives are increasingly recognizing the importance of implementing a Staff Augmentation Plan that enables a rapid response when needed. They're also recognizing that there are cost effective ways to augment their internal resources with high value skills that can help take their IT departments to the next level.

### Infinity Systems Software's Staff Augmentation Services

Infinity offers customized Staff Augmentation agreements tailored to meet your organization's unique needs. Our highly skilled professionals work under your direction and guidance, require minimal training and start-up time, and augment the skills of your in-house IT staff.

(Over, please)

### INFINITY'S STAFF AUGMENTATION SERVICES PROVIDE VALUE:

- Highly skilled resources ready to step in when vacancies are created by unforeseen events or planned leaves of absence
- Specialty technical skills to assist your IT Staff with special projects requiring advanced expertise
- On-demand access to certified professionals in areas of emerging technologies
- Hourly contracts that eliminate the search for and expense of an unnecessary full time employee when you don't need one
- Scalability to meet your fluctuating staffing needs
- Labor cost savings realized through Infinity's economy of scale

Infinity skills span the technology professional spectrum and include such skills as IT consulting, systems programming, systems and network administration, systems and application management, security services, and more. We also offer highly specialized capabilities in a variety of advanced technologies. Infinity's technology professionals have key certifications from IBM, Cisco, Suse, Red Hat and other leading edge technology companies.

Infinity recognizes that our client's need flexibility and scalability to meet the fluctuating demands of their businesses. Our specialists can be contracted:

- As needed when gearing up for a labor intensive project
- When you require advanced technical skills beyond your in-house capabilities
- To fill short or long term skills gaps created by unforeseen events or planned leaves of absence.
- To supplement your internal skills as a member of your team, contracted for a specific number of hours per month.

Leverage Infinity's expertise to ensure the success of your next IT project, to enhance your existing capabilities, or to fill a skills gap left by an unforeseen event or planned leave.

#### **Demonstrated Success**

When the mainframe Systems Programmer for a leading manufacturer of electrical supplies retired, the company was faced with an immediate gap to fill and a decision to make about replacing him permanently. They turned to their technology partner, Infinity Systems Software, for help. With a deep bench of certified professionals, Infinity was able to provide a highly skilled resource to meet their immediate needs.

**Every organization should have a Staff Augmentation Plan in place to leverage should the need arise.**

Working with the client, Infinity help determine the skills required and the scope of work expected. The company concluded that they did not need a full time employee in the role. Instead, they contracted a primary Infinity Systems Programmer for a set number of hours per month, with the option to increase the professional's hours as needed for projects. The company also leveraged Infinity's 24x7 Support for access to skilled programming resources on nights, weekends, or holidays as needed.

Infinity's Staff Augmentation services have saved the company money and given them access to highly skilled resources on whom they can depend.

## **Infinity's Staff Augmentation Services saved a leading electronics manufacturer the cost of hiring, training and sustaining a full time Systems Programmer.**
